Visual Page Builder	No-code dynamic page creation	Data binding, transformer pipeline
Full SNS Suite	Groups, comments, galleries, follows	CMS + SNS integration
AI Media Processing	Automatic video/audio/image processing	Background job pipeline, ffmpeg

Pricing Model

Implementation Steps

Advisor's Note — Strategic Insights

□ Positioning Strategy

Think-AI's greatest strength is its **"CMS + SNS + AI trinity integration."** The market is crowded with CMS-specialized (WordPress, Ghost), SNS-specialized (Discourse, Circle), and AI-chat-specialized solutions — but few offer all three on a single platform.

Recommended positioning:

Position Think-AI not as an "AI-equipped CMS," but as an "AI platform with CMS capabilities." AI is the foundation; CMS/SNS are features built on top. This messaging creates clear differentiation from competitors who bolt AI on as an afterthought.

□ Segment Priority

With limited resources, approach segments in this order:

PRIORITY	SEGMENT	RATIONALE
□ Highest	Media & News	AI writing assistant value is clearest. DX budgets available.
□ Second	Real Estate	AI concierge + Page Builder combo is unique value. Results measurable.
□ Future	Education / Community	Large market but more specialized competitors (LMS).

❑ Pricing Strategy Advice

- **Set starter plans at a low price point (not free).** Free plans lower quality expectations and increase churn (zero switching cost). A starter price around \$50/month is recommended.
- **Emphasize AI cost transparency.** "AI usage billed at cost" messaging builds trust with enterprise customers.
- **Introduce annual discounts (15-20% off)** to improve retention rates.

❑ Growth Strategy

Key Insight: In Phase 1, the priority is not "more features" but "one overwhelming success story." Deep adoption in one media company with measurable KPIs (60% faster article creation, 2x engagement) becomes the foundation for scaling sales.
