

# Troubleshooting

## Common Issues

### Deployment & Startup

| ISSUE                                | CAUSE                   | SOLUTION                                                     |
|--------------------------------------|-------------------------|--------------------------------------------------------------|
| <code>docker compose up</code> fails | Port conflict           | Check with <code>docker ps</code> , stop conflicting service |
| MySQL connection error               | Container startup order | Restart: <code>docker compose restart ghost</code>           |
| 403 Forbidden                        | API key not set         | Check <code>API_KEY</code> in <code>.env</code>              |
| 502 Bad Gateway                      | Container not running   | <code>docker compose ps</code> to check status               |

### AI Features

| ISSUE                  | CAUSE               | SOLUTION                         |
|------------------------|---------------------|----------------------------------|
| No AI response         | Invalid API key     | Check AI settings in admin panel |
| No voice output        | Mic permission      | Check browser mic permissions    |
| Image generation fails | Provider rate limit | Check DALL-E rate limits         |
| Streaming interrupted  | Network             | Verify WebSocket connection      |

## Performance

| ISSUE             | CAUSE              | SOLUTION                    |
|-------------------|--------------------|-----------------------------|
| Slow page load    | Cache miss         | Check SWR cache settings    |
| Slow AI response  | Provider latency   | Switch model in admin panel |
| Slow image upload | S3 region mismatch | Use same region as server   |

## Contact Support

When reporting issues, include:

```
Issue summary:
Time occurred:
Environment:
  - OS:
  - Browser:
  - Think-AI version:
Error message:
Steps to reproduce:
  1.
  2.
  3.
```

yaml

## Checking Logs

```
# Backend logs
docker compose logs ghost

# Frontend logs
docker compose logs nextjs
```

bash

# DB logs

```
docker compose logs mysql
```

# Media worker logs

```
docker compose logs media-worker
```

---

## Health Check

---

bash

# Container status

```
docker compose ps
```

# Resource usage

```
docker stats
```

# API health

```
curl http://localhost:2368/ghost/api/admin/health
```

# Disk usage

```
df -h
```
